COURSE PRESENTATION FORM

COURSE NAME    Theory of Computing

COURSE CODE    72001 (MSc New – DM 270) / 70101 (MSc Old – DM 509)

LECTURER       Diego Calvanese

TEACHING ASSISTANT    To be determined

TEACHING LANGUAGE   English

CREDIT POINTS     8

LECTURE HOURS     48

EXERCISE HOURS    24

TIMETABLE        See http://www.unibz.it/en/inf/progs/mcs/timetable/

OFFICE HOURS    See http://www.inf.unibz.it/~calvanese/teaching/

OFFICE HOURS    Time to be determined

LECTURER OFFICE HOURS    Via Sernesi 1, office C 5.01

TEACHING ASSISTANT OFFICE HOURS

PREREQUISITES   There are no prerequisites in terms of courses to attend. Students should be familiar with notions of mathematics and set theory, and with basic proof techniques, as taught in the mathematics courses of a bachelor in computer science.

OBJECTIVES      The objective of the Theory of Computing course is to introduce and study abstract, mathematical models of computation (such as Turing machines, formal grammars, recursive functions), and to use the abstract computation models to study the ability to solve computational problems, by identifying both the intrinsic limitations of computing devices, and the practical limitations due to limited availability of resources (time and space). A second objective is to show how to reason and prove properties about computations in a precise, formal, abstract way.

SYLLABUS         Formal languages, formal grammars, Turing Machines, recursive functions, undecidability, computational complexity, NP-completeness, time and space complexity classes, non-uniform computing models.

TEACHING FORMAT  Frontal lectures; exercises in class.

ASSESSMENT       Midterm or final examination on the first half of the syllabus (50%) + final examination on the second half of the syllabus (50%). The two parts of the
examination can be taken independently of each other within the three exam sessions of an academic year. Each part of the examination may be either written or oral.

**READING LIST**

Textbooks:

Further reading material:

**SOFTWARE USED**

None

**LEARNING OUTCOME**

After the course, students will know the fundamental models of computation, and the intrinsic and practical limitations of computing devices. They will also be familiar with formal techniques of computer science, and will be able to formally prove properties about computations.
