31 October 2007

## Outline

Limitations of RDFS

Web Ontology Language OWL  
 Design of OWL  
 OWL Layering  
 OWL and Description Logics  
 OWL Syntaxes

## RDFS as an Ontology Language

- ▶ Classes
- ▶ Properties
- ▶ Class hierarchies
- ▶ Property hierarchies
- ▶ Domain and range restrictions

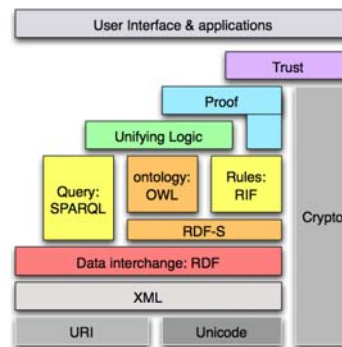

## Expressive limitations of RDF(S)

- ▶ Only binary relations
- ▶ Characteristics of Properties (e.g. inverse, transitive, symmetric)
- ▶ Local range restrictions (e.g. for Class Person, the property hasName has range xsd:string)
- ▶ Complex concept descriptions (e.g. Person is defined by Man and Woman)
- ▶ Cardinality restrictions (e.g. a Person may have at most 1 name)
- ▶ Disjointness axioms (e.g. nobody can be both a Man and a Woman)

## Layering issues

- ▶ Syntax
  - ▶ Only binary relations in RDF
  - ▶ Verbose Syntax
  - ▶ No limitations on graph in RDF
    - ▶ Every graph is valid
- ▶ Semantics
  - ▶ Malformed graphs
  - ▶ Use of vocabulary in language
    - ▶ e.g. `<rdfs:Class,rdfs:subClassOf,ex:a>`
  - ▶ Meta-classes
    - ▶ e.g. `<ex:a,rdf:type,ex:a>`

## Where were we?

## Stack of Languages

- ▶ XML
  - ▶ Surface syntax, no semantics
- ▶ XML Schema
  - ▶ Describes structure of XML documents
- ▶ RDF
  - ▶ Datamodel for “relations” between “things”
- ▶ RDF Schema
  - ▶ RDF Vocabulary Definition Language
- ▶ OWL
  - ▶ A more expressive Vocabulary Definition Language

9/42

## RDF Schema recap

- ▶ RDFS provides
  - ▶ Classes
  - ▶ Class hierarchies
  - ▶ Properties
  - ▶ Property hierarchies
  - ▶ Domain and range restrictions
- ▶ RDFS does not provide
  - ▶ Property characteristics (inverse, transitive, ...)
  - ▶ Local range restrictions
  - ▶ Complex concept definitions
  - ▶ Cardinality restrictions
  - ▶ Disjointness axioms

10/42

## Extending RDF Schema

- ▶ OWL extends RDF Schema to a full-fledged knowledge representation language for the Web
  - ▶ Logical expressions (and, or, not)
  - ▶ (in)equality
  - ▶ local properties
  - ▶ required/optional properties
  - ▶ required values
  - ▶ enumerated classes
  - ▶ symmetry, inverse

11/42

## Design Goals for OWL

- ▶ **Shareable**
- ▶ **Changing** over time
- ▶ **Interoperability**
- ▶ **Inconsistency** detection
- ▶ Balancing **expressivity and complexity**
- ▶ **Ease of use**
- ▶ Compatible with **existing standards**
- ▶ **Internationalisation**

13/42

## Requirements for OWL

- ▶ Ontologies are **object on the Web**
- ▶ with **their own meta-data**, versioning, etc...
- ▶ Ontologies are **extendable**
- ▶ They contain **classes, properties, data-types, range/domain, individuals**
- ▶ **Equality** (for classes, for individuals)
- ▶ **Classes as instances**
- ▶ **Cardinality** constraints
- ▶ **XML** syntax

14/42

## Objectives for OWL

Objectives:

- ▶ layered language
- ▶ complex datatypes
- ▶ digital signatures
- ▶ decidability (in part)
- ▶ local unique names (in part)

Disregarded:

- ▶ default values
- ▶ closed world option
- ▶ property chaining
- ▶ arithmetic
- ▶ string operations
- ▶ partial imports
- ▶ view definitions
- ▶ procedural attachments

15/42

## Language layers of OWL

- ▶ OWL Lite
  - ▶ Classification hierarchy
  - ▶ Simple constraints
- ▶ OWL DL
  - ▶ Maximal expressiveness
  - ▶ While maintaining tractability
  - ▶ Standard formalisation in a DL
- ▶ OWL Full
  - ▶ Very high expressiveness
  - ▶ Losing tractability
  - ▶ All syntactic freedom of RDF (self-modifying)

17/42

## Features of OWL language layers

- ▶ OWL Lite
  - ▶ (sub)classes, individuals
  - ▶ (sub)properties, domain, range
  - ▶ conjunction
  - ▶ (in)equality
  - ▶ cardinality 0/1
  - ▶ datatypes
  - ▶ inverse, transitive, symmetric properties
  - ▶ someValuesFrom
  - ▶ allValuesFrom
- ▶ OWL DL
  - ▶ Negation
  - ▶ Disjunction
  - ▶ Full cardinality
  - ▶ Enumerated types
  - ▶ hasValue
- ▶ OWL Full
  - ▶ Meta-classes
  - ▶ Modify language

18/42

## OWL Full

- ▶ **No restriction on use of vocabulary** (as long as legal RDF)
  - ▶ Classes as instances (and much more)
- ▶ **RDF style model theory**
  - ▶ Reasoning using FOL engine
  - ▶ Semantics should correspond to OWL DL for restricted KBs

19/42

## OWL DL

- ▶ Use of vocabulary restricted
  - ▶ Can't be used to do "nasty things" (e.g. modify OWL)
  - ▶ No classes as instances
  - ▶ Defined by abstract syntax
- ▶ Standard DL-based model theory
  - ▶ Direct correspondence with a DL
  - ▶ Reasoning via DL engines

20/42

## OWL Lite

- ▶ No explicit negation or union
- ▶ Restricted cardinality (0/1)
- ▶ No nominals (oneOf)
- ▶ DL-based semantics
  - ▶ Reasoning via DL engines (+datatypes)
- ▶ Semantically, only small restriction on OWL DL
  - ▶ No nominals
  - ▶ No arbitrary cardinality

21/42

## OWL and Description Logics

- ▶ OWL Lite corresponds to the DL  $SHIF(\mathbf{D})$ 
  - ▶ Named classes ( $A$ )
  - ▶ Named properties ( $P$ )
  - ▶ Individuals ( $C(o)$ )
  - ▶ Property values ( $P(o, a)$ )
  - ▶ Intersection ( $C \sqcap D$ )
  - ▶ Union (!) ( $C \sqcup D$ )
  - ▶ Negation (!) ( $\neg C$ )
  - ▶ Existential value restrictions ( $\exists P.C$ )
  - ▶ Universal value restrictions ( $\forall P.C$ )
  - ▶ Unqualified (0/1) number restrictions ( $\geq nP, \leq nP, = nP$ ),  $0 \leq n \leq 1$
- ▶ OWL DL corresponds to the DL  $SHOIN(\mathbf{D})$ 
  - ▶ Arbitrary number restrictions ( $\geq nP, \leq nP, = nP$ ),  $0 \leq n$
  - ▶ Property value ( $\exists P.\{o\}$ )
  - ▶ Enumeration ( $\{o_1, \dots, o_n\}$ )

23/42

## OWL constructs

OWL Construct	DL	Example
intersectionOf	$C_1 \sqcap \dots \sqcap C_n$	<i>Human</i> $\sqcap$ <i>Male</i>
unionOf	$C_1 \sqcup \dots \sqcup C_n$	<i>Doctor</i> $\sqcup$ <i>Lawyer</i>
complementOf	$\neg C$	$\neg$ <i>Male</i>
oneOf	$\{o_1, \dots, o_n\}$	$\{john, mary\}$
allValuesFrom	$\forall P.C$	$\forall hasChild.Doctor$
someValuesFrom	$\exists P.C$	$\exists hasChild.Lawyer$
value	$\exists P.\{o\}$	$\exists citizenOf.USA$
minCardinality	$\geq nP.C$	$\geq 2 hasChild.Lawyer$
maxCardinality	$\leq nP.C$	$\leq 1 hasChild.Male$
cardinality	$= nP.C$	$= 1 hasParent.Female$

+ XML Schema datatypes: int, string, real, etc...

24/42

## OWL axioms

OWL Axiom	DL	Example
SubClassOf	$C_1 \sqsubseteq C_2$	<i>Human</i> $\sqsubseteq$ <i>Animal</i> $\sqcap$ <i>Biped</i>
EquivalentClasses	$C_1 \equiv \dots \equiv C_n$	<i>Man</i> $\equiv$ <i>Human</i> $\sqcap$ <i>Male</i>
SubPropertyOf	$P_1 \sqsubseteq P_2$	<i>hasDaughter</i> $\sqsubseteq$ <i>hasChild</i>
EquivalentProperties	$P_1 \equiv \dots \equiv P_n$	<i>cost</i> $\equiv$ <i>price</i>
SameIndividual	$o_1 = \dots = o_n$	<i>President_Bush</i> = <i>G.W._Bush</i>
DisjointClasses	$C_i \sqsubseteq \neg C_j$	<i>Male</i> $\sqsubseteq$ $\neg$ <i>Female</i>
DifferentIndividuals	$o_i \neq o_j$	<i>john</i> $\neq$ <i>peter</i>
inverseOf	$P_1 \equiv P_2^-$	<i>hasChild</i> $\equiv$ <i>hasParent</i> <sup>-</sup>
Transitive	$P^+ \sqsubseteq P$	<i>ancestor</i> <sup>+</sup> $\sqsubseteq$ <i>ancestor</i>
Symmetric	$P \equiv P^-$	<i>connectedTo</i> $\equiv$ <i>connectedTo</i> <sup>-</sup>

25/42

## More on OWL species

- ▶ OWL Full is **not** a Description Logic
- ▶ OWL Lite has strong syntactic restrictions, but only limited semantics restrictions, compared with OWL DL
  - ▶ Negation can be encoded using disjointness
  - ▶ With negation and conjunction, you can encode disjunction

Class(C complete unionOf(B C))

is equivalent to:

DisjointClasses(notB B)

DisjointClasses(notC C)

Class(notBandnotC complete notB notC)

DisjointClasses(notBandnotC BorC)

Class(C complete notBandnotC)

26/42

## More on layering

- ▶ For an OWL DL-restricted KB, OWL Full semantics is **not** equivalent to OWL DL semantics

John friend Susan .

OWL Full entails:

John rdf:type owl:Thing . Susan rdf:type owl:Thing . friend  
 rdf:type owl:ObjectProperty .

John rdf:type \_:x . \_:x owl:onProperty friend . \_:x  
 owl:minCardinality "1"^^xsd:nonNegativeInteger .

27/42

## Syntaxes of OWL

- ▶ RDF
  - ▶ Official exchange syntax
  - ▶ Hard for humans
  - ▶ RDF parsers are hard to write!
- ▶ UML
  - ▶ Large user base
- ▶ XML
  - ▶ Not the RDF syntax
  - ▶ Better for humans
  - ▶ More XML than RDF tools available
- ▶ Abstract syntax
  - ▶ Not defined for OWL Full
  - ▶ Human readable

29/42

## OWL in RDF/XML

Example from [OwlGuide]:

```
<!ENTITY vin
"http://www.w3.org/TR/2004/REC-owl-guide-20040210/wine#" >
<!ENTITY food
"http://www.w3.org/TR/2004/REC-owl-guide-20040210/food#" > ...
<rdf:RDF
xmlns:vin="http://www.w3.org/TR/2004/REC-owl-guide-20040210/wine#"
xmlns:food="http://www.w3.org/TR/2004/REC-owl-guide-20040210/food#"
... >

<owl:Class rdf:ID="Wine"> <rdf:subClassOf
rdf:resource="#&food;PotableLiquid" /> <rdf:label
xml:lang="en">wine</rdf:label> <rdf:label
xml:lang="fr">vin</rdf:label> ... </owl:Class>

<owl:Class rdf:ID="Pasta"> <rdf:subClassOf
rdf:resource="#EdibleThing" /> ... </owl:Class> </rdf:RDF>
```

30/42

## OWL Abstract syntax

Class( professor partial ) Class( associateProfessor partial  
academicStaffMember )

DisjointClasses ( associateProfessor assistantProfessor )  
DisjointClasses ( professor associateProfessor )

Class( faculty complete academicStaffMember )

31/42

## OWL Abstract syntax

In DL syntax:

associateProfessor  $\sqsubseteq$  academicStaffMember  
associateProfessor  $\sqsubseteq \neg$  assistantProfessor  
professor  $\sqsubseteq \neg$  associateProfessor  
faculty  $\equiv$  academicStaffMember

32/42

## More examples

DatatypeProperty( age range( xsd:nonNegativeInteger ) )  
ObjectProperty( lecturesIn )

ObjectProperty( isTaughtBy domain( course ) range( academicStaffMember ) )  
SubPropertyOf( isTaughtBy involves )

ObjectProperty( teaches inverseOf( isTaughtBy )  
domain( academicStaffMember ) range( course ) )

EquivalentProperties ( lecturesIn teaches )

ObjectProperty( hasSameGradeAs Transitive Symmetric domain( student )  
range( student ) )

33/42

## More examples

In DL syntax:

$T \sqsubseteq \forall \text{age.xsd} : \text{nonNegativeInteger}$   
 $T \sqsubseteq \forall \text{isTaughtBy}^- . \text{course}$   
 $T \sqsubseteq \forall \text{isTaughtBy} . \text{academicStaffMember}$   
 $\text{isTaughtBy} \sqsubseteq \text{involves}$   
 $\text{teaches} \equiv \text{isTaughtBy}^-$   
 $T \sqsubseteq \forall \text{teaches}^- . \text{academicStaffMember}$   
 $T \sqsubseteq \forall \text{teaches} . \text{course}$   
 $\text{lecturesIn} \equiv \text{teaches}$   
 $\text{hasSameGradeAs}^+ \sqsubseteq \text{hasSameGradeAs}$   
 $\text{hasSameGradeAs} \equiv \text{hasSameGradeAs}^-$   
 $T \sqsubseteq \forall \text{hasSameGradeAs}^- . \text{student}$   
 $T \sqsubseteq \forall \text{hasSameGradeAs} . \text{student}$

34/42

## More examples

Individual ( 949318 type( lecturer ) )

Individual ( 949352 type( academicStaffMember ) value( age  
"39"^^&xsd:integer ) )

ObjectProperty( isTaughtBy Functional )

Individual ( CIT1111 type( course ) value( isTaughtBy 949352 )  
value( isTaughtBy 949318 ) )

DifferentIndividuals ( 949318 949352 ) DifferentIndividuals ( 949352  
949111 949318 )

35/42

## More examples

In DL syntax:

949318 : lecturer  
949352 : academicStaffMember  
<949352, "39"^^&xsd:integer> : age  
 $T \sqsubseteq \leq 1 \text{isTaughtBy}$   
CIT1111 : course  
<CIT1111, 949352> : isTaughtBy  
<CIT1111, 949318> : isTaughtBy  
949318  $\neq$  949352  
949352  $\neq$  949111  
949111  $\neq$  949318  
949352  $\neq$  949318

36/42

## More examples

Class( firstYearCourse partial restriction (isTaughtBy allValuesFrom ( Professor )))

Class(mathCourse partial restriction (isTaughtBy hasValue (949352)))

Class(academicStaffMember partial restriction (teaches someValuesFrom (undergraduateCourse)))

Class(course partial restriction (isTaughtBy minCardinality (1)))

Class(department partial restriction (hasMember minCardinality(10))  
restriction (hasMember maxCardinality(30)))

37/42

## More examples

In DL syntax:

$firstYearCourse \sqsubseteq \forall isTaughtBy. Professor$   
 $mathCourse \sqsubseteq \exists isTaughtBy. \{949352\}$   
 $academicStaffMember \sqsubseteq \exists teaches. undergraduateCourse$   
 $course \sqsubseteq \geq 1 isTaughtBy$   
 $department \sqsubseteq \geq 10 hasMember \sqcap \leq 30 hasMember$

38/42

## More examples

Class(course partial complementOf(staffMember))

Class(peopleAtUni complete unionOf(staffMember student))

Class(facultyInCS complete intersectionOf ( faculty  
restriction (belongsTo hasValue (CSDepartment))))

Class(adminStaff complete intersectionOf ( staffMember  
complementOf(unionOf(faculty techSupportStaff))))

39/42

## More examples

In DL syntax:

$course \sqsubseteq \neg staffMember$   
 $peopleAtUni \equiv staffMember \sqcup student$   
 $facultyInCS \equiv faculty \sqcap \exists belongsTo. \{CSDepartment\}$   
 $adminStaff \equiv staffMember \sqcap \neg (faculty \sqcup techSupportStaff)$

40/42

## Summary

### Limitations of RDFS

### Web Ontology Language OWL

- Design of OWL
- OWL Layering
- OWL and Description Logics
- OWL Syntaxes
