

University Academic Curriculum Vitae

Personal information

Full Name: Roberto Confalonieri
Academic Title: Ph.D. in Artificial Intelligence
Current Position: Assistant Professor at Free University of Bozen-Bolzano
Nationality: Italian
Date/place of birth: 26th March 1978, Bologna (Italy)
Current Address: via Tre Santi 1/A, 39100 Bolzano, Italy
Email: roberto.confalonieri@unibz.it
Mobile: +39 327 8707544
WWW: <http://www.inf.unibz.it/~rconfalonieri/>
LinkedIn: <http://www.linkedin.com/in/rconfalonieri>

CV Resume

I am Assistant Professor at the Free University of Bozen-Bolzano, Italy, and co-responsible for the Smart Data Factory, a technology transfer centre of the Faculty of Computer Science, where I acquire and direct several research projects and collaborations with industries. I received my Ph.D. in Artificial Intelligence (with distinction) from the Polytechnic University of Catalonia (2011), and a M.Sc. in Computer Science from the University of Bologna. I have worked both in industry and in academia, as R&D engineer at NaradaRobotics S.L. (Spain), Assistant Professor at the University of Barcelona (2016), and as postdoctoral researcher in several research institutions in Europe. My research interests include formalisms for reasoning with incomplete and uncertain information, agreement technologies, such as decision making and argumentation, concept invention systems, and ontologies. I co-authored over 40 peer-reviewed journal and conference articles and I co-edited the book "Concept Invention: Foundations, Implementation, Social Aspects and Applications", to be published by Springer in 2018. In 2016, I was awarded with the Best Paper Award at the International Computational Creativity Conference (ICCC 2016). In 2017, I was chair of the Data meets Applied Ontologies (DAO) workshop held at the 3rd edition of the Joint Ontology Workshops (JOWO) organised by the International Association for Ontology and its Applications (IAOA) and in 2018 I will be chairing the Data meets Applied Ontologies in Open Science and Innovation (DAO-SI) to be held at the 10th International Conference on Formal Ontology in Information Systems, FOIS 2018.

Present appointment

Since January 2017: Assistant Professor at the Faculty of Computer Science, Free University of Bozen-Bolzano, Italy.

Main tasks:

I am co-responsible to lead the efforts of managing and running the [Smart Data Factory lab](#) at the [NOI Techpark](#). I am responsible of third mission activities, especially industry-oriented, of the Faculty of Computer Science. My mission is to acquire, mediate, manage and execute research collaborations with industries and to engage members of the Faculty of Computer Science in research-driven industrial collaborations. As far as research is concerned, I am currently focusing on concept invention, how to integrate heterogeneous knowledge bases, assess their integration, and develop tools for knowledge management.

Education since leaving school

December 2011: Ph.D. in Artificial Intelligence, Universitat Politècnica de Catalunya.

Ph.D. Thesis "*The Role of Preferences in Logic Programming: Nonmonotonic Reasoning, User Preferences, Decision under Uncertainty*".

Advisors: Dr. Javier Vázquez-Salceda and Dr. Juan Carlos Nieves.

Grade: *Excellent Cum Laude*

The Ph.D. jury was composed by: Prof. Gerhard Brewka, Prof. Francesca Toni, Dr. Lluís Godó Lacasa and Dr. Stefan Woltran.

July 2009: Advanced Studies Diploma in Artificial Intelligence, Universitat Politècnica de Catalunya.

Grade: *Excellent*

March 2005: Laurea Magistrale in Informatica at the University of Bologna (Italy)

Thesis title: "*Un'ontologia per l'orchestrazione di servizi Web semantici*".

Advisors: Prof. Mauro Gaspari and Dr. John Domingue

Grade: *106/110*

Accreditations

Since January 2013: Habilitation for "Professorat Lector" (Tenure-eligible lecturer), AQU Catalunya accreditation (Agència per a la Qualitat del Sistema Universitari de Catalunya)

Professional experience

October 2016 – December 2016: Assistant Professor at Universitat de Barcelona.

Main tasks:

I taught Introduction to Programming in the 1st year of Computer Science Engineering.

October 2016 – December 2016: R&D Engineer at Narada Robotics S.L.

Main tasks:

I focused on integrating machine learning algorithms (for classification of real-time speeches) into Web applications, besides, I developed an astrology application (<http://astro.naradarobotics.com/horoscope>).

November 2014 – September 2016: Postdoctoral Researcher at IIIA-CSIC (<http://www.iiia.csic.es/>) in the COINVENT European research project (<http://www.coinvent-project.eu/>).

Main tasks:

I was responsible of the development of a cognitive-based computational creativity system that aims at assisting humans in creative tasks such as music harmonisation and mathematics. Computational creativity has recently attracted a lot of interest among researchers in Artificial Intelligence and it aims at enhancing machine intelligence with cognitive models that have been studying how human creativity works.

October 2013 – October 2014: Adjunct Scientist at IIIA (Artificial Intelligence Research Institute) - CSIC (Spanish National Research Council)

Main tasks: I was involved in the transfer of a technology developed in the European project ACE (<http://www.iiia.csic.es/en/project/ace>), that is, a distributed agent-based platform for developing applications enhanced with social intelligence. I participated in the creation of SocialBrowsing, a spin-off of the Artificial Intelligence Research Institute (IIIA) of the Spanish National

Research Council (CSIC).

SocialBrowsing's mission was to enable multiplayer applications – providing a platform for companies and developers to create online collaborative social applications. The platform will help people to transform their applications, allowing shared online experiences and above all creating new forms of social interaction.

November 2012 – August 2013: Postdoctoral Researcher at Goldsmiths College, University of London, in the ACE project (<http://www.chistera.eu/projects/ace>).

Main tasks: I was responsible of the integration of a Personal Assistant Agent architecture with the other components of the system, that are, a multi-modal GUI and a peer-to-peer Electronic Institution infrastructure. The whole system, WeCurate, is a shared browser that allows users to collectively curate a group collection of images. The system was successfully trialed in the Horniman museum in London in November 2012. I was also involved in the data analysis for the system evaluation and in the scientific dissemination of the project results.

October 2011 – September 2012: Postdoctoral Researcher at Institut de Recherche en Informatique de Toulouse (<http://www.irit.fr/-Equipe-ADRIA->) in the ACE project (<http://www.iiia.csic.es/en/project/ace>)

Main tasks: I was responsible of the design and implementation of a Personal Assistant Agent architecture. The agent architecture developed enriches online cultural experiences, specifically by enabling social aspects, such as shared browsing, and by assisting the users in making decisions, such as users' preference aggregation and argumentation-based multiple-criteria decision making. I was involved in the scientific dissemination of the project results (articles and deliverable writing).

2009 – 2011: Research Assistant at Universitat Politècnica de Catalunya (Barcelona) (<https://kemlg.upc.edu/>) in the ICT-ALIVE project.

Main tasks: I was responsible of the implementation of one of the use-cases of the project, that is, a system for the provision of context-aware services for citizens and tourists in Barcelona. My role was to develop a logic programming-based formalism for user profile representation and a preference reasoner able to calculate the preferred options for a user given a context. The reasoner was embedded in the ALIVE architecture such that personalised information was retrieved from context-aware services taking user preferences into account. I was also involved in the scientific dissemination of the project results (articles and deliverable writing).

2007 – 2009: Research Assistant at Universitat Politècnica de Catalunya (Barcelona) (<https://kemlg.upc.edu/>) in the IST-CONTRACT project.

Main tasks: I was responsible of the design and development of a middleware architecture for building contract-aware agent-based (Web) services. The architecture was supporting the provision and consumption of simple and composite Web services according to the specification of electronic contracts. I was also involved in the scientific dissemination of the project results (articles and deliverable writing).

2006: Research Assistant at the Economics Department of the University of Bologna (Italy) in the Rebag-Ware project.

Main tasks: I was technical manager and main programmer of the project. I implemented the Rebag-Ware prototype. Rebag-Ware allows users to rate

public works online and to indirectly evaluate firms and public organisations about the fulfilment of their obligations to fight governance's corruption.

June 2005 – December 2005: NET Analyst Programmer at T.S.F. (Tele Sistemi Ferroviari) in Bologna (Italy)

Main tasks: I was hired as .Net programmer and I was involved in the development of a Web application for the intelligent scheduling of the rail traffic in the Italian rail infrastructure.

June 2004 – June 2005: Intern at the Knowledge Media Institute (KMI) (<http://kmi.open.ac.uk/people/alumni/roberto-confalonieri>) of the Open University (OU), Milton Keynes, UK in the EU DIP project (<http://dip.semanticweb.org/>)

Main tasks: I was involved in the extension of a Java- and LISP-based reasoning service platform (IRS-III) for the orchestration of Semantic Web Services according to an orchestration ontology that I proposed in the context of my Computer Science degree.

Awards

June 2016: Best Paper Award at the International Conference on Computational Creativity 2016, for the paper "An Argument-based Creative Assistant for Harmonic Blending".

<http://www.computationalcreativity.net/iccc2016/best-paper-award/>

March 2014: 2nd Place in the 3rd edition of the VALORTEC contest

The VALORTEC competition was organized by ACCIÓ – the agency for competitiveness of Catalan companies of the Department of Enterprise and Employment - and rewarded the best business plans for emerging technologies in the field of Catalan universities. The 3rd edition saw about 50 proposals from which the jury chose 10 finalists. The finalists received a training program of 25 hours in order to prepare a business plan and to present it to exploitation technology specialists.

The jury consisted of representatives of ACCIÓ, CINC Center, Arvor Consulting, EAE Business School, IESE, Rousaud Costas Duran and Office Ponti. We were selected as 2nd best business plan and we received a prize in cash of 2.000 €.

Experience in teaching

2016/17/18: Class: "Automatic Reasoning in Answer Set Programming"
Class Level: MOOC, Master in Research in Artificial Intelligence - Universitat Politècnica de Valencia

2016/17: Class: "Introduction to Programming"
Class Level: Bachelor Degree in Computer Science Engineering, Universitat de Barcelona.
Course load: 30 hours, 25 Students (approx.)

2015-16-17: Class: "Software Development"
Class Level: Vocational Training in Computer Science, Barcelona (Spain)
Course load: 66 hours, 50 Students (approx.)

2014: Class: "Web application development using Java and MySQL"
Class Level: Vocational Training in Computer Science, Barcelona (Spain)
Course load: 240 hours, 15 Students (approx.)

2010/2011: Class: "Applications of Artificial Intelligence (AIA)"
Class Level: Engineering in Computer Science at Universitat Politècnica de Catalunya, Barcelona (Spain)

Course load: 15 hours, 25 Students (approx.)

2005/2006: Class: “*Computer Architecture*”

Class Level: Computer Science Degree at the University of Bologna (Italy)

Course load: 40 ours, 50 Students (approx.)

R&D projects

Since October 2017 - Investigator in the STELLA project at UNIBZ.

STELLA project: The Spatio-Temporal Logics for Cognitive Artificial Intelligence (STELLA) project is a research project funded by UNIBZ. The aim of this project is to initiate a systematic study into the formal logical modelling of the building blocks of human conceptual thinking, focusing on the deeply interlinked notions of affordance and image schema. The main challenge here is that the common-sense abstractions of these notions deviate significantly from the typical spatial and temporal models found in contemporary mainstream knowledge representation. To this end, we will study novel combinations and variations of models of time and space, and devise corresponding cognitively motivated spatio-temporal logics.

Since October 2017 - Investigator in the SECO project at UNIBZ.

SECO project: The Social Evaluation of Concepts (SECO) project is a research project funded by UNIBZ. The main goal of SECO is to help consolidate UNIBZ’s position as one of the key European players in the evaluation of computational ontologies. Evaluating the adequacy of a proposed ontology is a task that crucially requires to address a community of users with possibly heterogeneous views about the definitions and the meanings of the concepts captured by the ontological modelling.

Since October 2017 – Investigator in the CREED project at UNIBZ.

CREED project: The Coherence and Explanation (CREED) project is a research project funded by UNIBZ. The aim of this project is to develop a philosophical understanding and a formal definition of the concept of explanation of Artificial Intelligence and Machine Learning based technology.

Since January 2017 – Investigator in the COCO project at UNIBZ.

COCO project: The Computational Technologies for Concept Invention (COCO) project is a research project funded by UNIBZ that aims at integrating agreement technologies, such as argumentation and coherence, with ontologies to build computational models of concept invention.

November 2014 – September 2016 Postdoctoral Researcher in the COINVENT project.

COINVENT project: COINVENT (FET-611553 is an European research project with a topic at the intersection between cognitive science, computational creativity, cognitive artificial intelligence, and formal methods in computer science, conducted by seven international academic partners (<http://www.coinvent-project.eu/>)

2011 – 2013: Postdoctoral Researcher in the ACE project.

ACE project: ACE (CHRI-001-03) is a research project funded by the European Commission in the context of CHIST-ERA (European Coordinated Research on Long-term Challenges in Information and Communication Sciences & Technologies ERA-Net). The aim of the project is about exploiting the

predominance of social networking using autonomic software agents to enrich, encourage and enliven engagement with online cultural artefacts such as from a museum or a gallery for “*Autonomic Software Engineering for online cultural experiences*” (<http://www.chistera.eu/projects/ace>)

2009 – 2011: Research Assistant in the ICT-ALIVE project.

ALIVE project: ALIVE (FP7-215890) is a research project funded by the European Commission in the context of the 7th Framework Program. The aim of the project is to develop frameworks, components and tools for “*Coordination, Organisation and Model Driven Approaches for Dynamic, Flexible, Robust Software and Services Engineering*” (http://cordis.europa.eu/project/rcn/85311_en.html)

2007 – 2009: Research Assistant in the IST-CONTRACT project.

CONTRACT project: CONTRACT (INFSO-IST-034418) is a research project funded by the European Commission in the context of the 6th Framework Program. The aim of the project was to develop frameworks, components and tools for “*Contract based e-Business System Engineering for robust, verifiable, Cross-Organisational Business Applications*”.

2006: Research Assistant in the Rebag-Ware project.

Rebag-Ware project: Rebag-Ware is a research project founded by the Economics Department of the University of Bologna (Italy), whose aim was to develop the technical infrastructure for *Reputation-based Governance of Public Works*, a governance philosophy that hinges on the reputation of the individuals and organisations contributing to the execution of policies.

2004 – 2005: Intern and Consultant in the DIP project.

DIP project: The DIP project is a research project funded by the European Commission for developing framework and tools for *Data, Information, and Process Integration with Semantic Web Services* (<http://dip.semanticweb.org/>).

R&D projects with industries

Since April 2018: Co-director of the commissioned research activities in the project "Development of a smart stock management system (Provisioning 4.0)", Smart Data Factory project, customer: Datatellers s.r.l., 10k Euros

Since April 2018: Co-director of the commissioned research activities in the project "Piattaforma modulare per la gestione territoriale “Simultaneous Care” del paziente oncologico (ONCOnet2)", Smart Data Factory project, customer: EDP Progetti s.r.l, 25k Euros

Since March 2018: Co-director of the commissioned research activities in the project "A Systematic Mapping Study of South-Tyrolean Open Data Repositories (SCORE)", Smart Data Factory project, customer: IDM Südtirol/Alto-Adige, 3k Euros

March 2018: Co-director of the research activities for the development of a Web application that identifies and suggests political parties to users for the local election in South-tyrol ("Partitometro"), Smart Data Factory in collaboration with FF Das Südtiroler Wochenmagazin, Brixen-Bressanone, Italy

June – December 2017: Co-director of the commissioned research activities in the project "IoT for Climbers", Smart Data Factory project, customer: VerticalLife gmbh, 5k Euros

Research Summary

My research activity can be classified into three main areas: Knowledge Representation (KR), Multi-agent Systems (MAS), and Concept Invention (CI).

My research in KR focuses on Reasoning under Incomplete and Uncertain Information, User Preferences, and Decision Making under Uncertainty, with emphasis on Answer Set Programming (ASP). I proposed several theoretical frameworks that extend the standard ASP syntax and semantics to deal with preferences and qualitative uncertainty [J5,A29,A30,A32,T3], nested preferences [J6,A28], decision making under uncertainty [J4,J7,A26], and flexible preference queries to uncertain databases [J5,A23]. Thanks to my programming skills, I engineered these frameworks into proof-of-concept prototypes. Some of them have been applied to applications such as context-aware recommendation systems [A24,A25,T1].

My research in MAS is mainly concerned in using agent technology to develop socio-technical systems by means of Electronic Institutions [J3,A18,A19,A20,A21,A22] and computational social choice [A1,A3]. Other topics of research were intelligent contracting agents [A31,A33,A34,A35], and reputation mechanisms applied to public governance [A36].

Recently, I started to work in CI in the formalisation and implementation of Fauconnier and Turner’s cognitive theory of conceptual blending for modelling human creativity [0,0,J2,A10]. Within this branch of research, research directions are: the integration of description logic knowledge bases [J2,A1,A4,A5,A6,A10], the use of argumentation to evaluate the outcomes of knowledge integration [A11,A12,A15], and the implementation of conceptual blending as a semiotic system [0,A14,A16].

Thesis Direction

PeerFlow Cloud: Migración de P2P a Elastic Cloud Computing, Universitat Autònoma de Barcelona, July 2015.

Student: Germán Arranz Cobo

Level: B.Ed. in Telecommunications engineering

Discipline: Artificial Intelligence

Qualification: *Notable*

Combining Coordination and Organisation Mechanisms for the Development of a Dynamic Context-aware Information System Personalised by means of Logic-based Preference Methods, Universitat Politècnica de Catalunya, September 2010 (<http://upcommons.upc.edu/pfc/handle/2099.1/11318>).

Student: Palau Manel.

Level: Master thesis

Discipline: Artificial Intelligence

Qualification: *Excellent*

Research and travel grants

2011: Travel grant for Ph.D. European mention

2011: Short Term Scientific Mission in COST Action Number IC0602 Algorithmic Decision Theory

2004: Travel grant of the University of Bologna (Italy) for a research internship in relation to the Computer Science degree thesis

Abroad experiences

November 2012 – August 2013: Part-time Postdoctoral Researcher at Computing Department, Goldsmiths College, University of London, UK.

October 2011 – September 2012: Postdoctoral Researcher at the Institut de Recherche en Informatique de Toulouse (IRIT) of Université Paul Sabatier in Toulouse, France.

October 2010 – February 2011: Invited Pre-doctoral Researcher at the Institut de Recherche en Informatique de Toulouse (IRIT) of Université Paul Sabatier in Toulouse, France.

June 2004 – June 2005: Internship at Knowledge Media Institute (KMI) at the

Entrepreneurship	<p>Open University (OU), Milton Keynes, UK</p> <p>I led the technology transfer of the results obtained in the European research project ACE. I won the 2nd price of the VALORTEC contest by presenting and defending a business plan about the exploitation of the ACE technology. Besides, I received entrepreneurship training as part of the contest itself.</p>
Member of	<p>Catalan Association for Artificial Intelligence (CCIA)</p> <p>Associazione Italiana per l'Intelligenza Artificiale (AI*IA)</p>
Reviewer of	<p>International Semantic Web Conference (ISWC 16)</p> <p>7th International Conference on Computational Creativity (ICCC 16)</p> <p>14th International Conference on Principles of Knowledge Representation and Reasoning (KR14)</p> <p>22th, 24th and 25th International Conference on Electronics, Communications and Computers (CONIELECOMP 2012, 2014, 2015)</p> <p>International Journal of Approximate Reasoning (IJAR)</p> <p>Expert Systems With Applications (ESWA)</p>
Language competence	<p>Italian, Native proficiency</p> <p>English, Professional working proficiency (C1 - Cambridge)</p> <p>Spanish, Professional working proficiency (C1 – Cervantes)</p> <p>Catalan, Professional working proficiency (C1 – CNL Barcelona)</p> <p>German, Professional working proficiency (C1 – Goethe Institute, Barcelona)</p>
Collaborators (past and present)	<p>Goldsmiths College London: Goldsmiths has a reputation for innovative, interdisciplinary and challenging approaches to all its subjects; a particular strength in the creative and cultural dimensions of science, the arts, humanities and social sciences; and a strong record of widening participation in disadvantaged communities of south east and east London. <u>Contacts:</u> Prof. Mark d’Inverno and Dr. Matthew Yee-King</p> <p>IIIA-CSIC: The IIIA (Artificial Intelligence Research Institute) is a public-funded research centre in Bellaterra, belonging to the Spanish Council for Scientific Research. Its main activity is research in Artificial Intelligence. <u>Contact:</u> Prof. Carles Sierra, Dr. Marco Schorlemmer</p> <p>IRIT (Institut de Recherche en Informatique de Toulouse) represents one of the major potential of the French research in computer science. The laboratory has 19 research groups which are dispatched in seven scientific themes covering all the computer science domains. One of these groups is concerned by Artificial Intelligence, namely modeling reasoning and decision processes. <u>Contact:</u> Dr. Henri Prade and Dr. Leila Agmoud</p> <p>UPC BarcelonaTech: The UPC’s Knowledge Engineering and Machine Learning group (KEMLg) in Barcelona has a long history of contributions in coordination and organisation techniques for large scale distributed systems agent technology. <u>Contacts:</u> Prof. Ulises Cortés and Dr. Javier Vázquez-Salceda</p>

The undersigned Roberto Confalonieri gives his consent to his personal data being processed, within the limits of the legislative decree 196/2003, for formalities connected with the present procedure.
