## Variables

- Variables are universally quantified in the scope of a clause.
- A variable assignment is a function from variables into the domain.
- Given an interpretation and a variable assignment, each term denotes an individual and each clause is either true or false.
- A clause containing variables is true in an interpretation if it is true for all variable assignments.

## Queries and Answers

A query is a way to ask if a body is a logical consequence of the knowledge base:
$? b_{1} \wedge \cdots \wedge b_{m}$.
An answer is either

- an instance of the query that is a logical consequence of the knowledge base $K B$, or
- no if no instance is a logical consequence of $K B$.

## Example Queries

```
\(K B=\left\{\begin{array}{l}\text { in }(\text { kim, } r 123) . \\ \text { part_of }(r 123, \text { cs_building }) . \\ \text { in }(X, Y) \leftarrow \text { part_of }(Z, Y) \wedge i n(X, Z) .\end{array}\right.\)
```

Query Answer
?part_of(r123, B).

## Example Queries

$$
K B=\left\{\begin{array}{l}
\text { in(kim, } r 123) . \\
\text { part_of }(r 123, \text { cs_building }) . \\
i n(X, Y) \leftarrow \text { part_of }(Z, Y) \wedge i n(X, Z) .
\end{array}\right.
$$

| Query | Answer |
| :--- | :--- |
| ?part_of $(r 123, B)$. | part_of (r123, cs_building $)$ |

?part_of(r023, cs_building).

## Example Queries

$$
K B=\left\{\begin{array}{l}
\text { in }(\text { kim, } r 123) . \\
\text { part_of }(r 123, \text { cs_building }) . \\
i n(X, Y) \leftarrow \text { part_of }(Z, Y) \wedge i n(X, Z) .
\end{array}\right.
$$

| Query | Answer |
| :--- | :--- |
| ?part_of $(r 123, B)$. | part_of(r123, cs_building $)$ |
| ?part_of $(r 023$, cs_building $)$. | no |
| ?in(kim, r023). |  |

## Example Queries

$$
K B=\left\{\begin{array}{l}
\text { in }(\text { kim, } r 123) . \\
\text { part_of }(r 123, \text { cs_building }) . \\
i n(X, Y) \leftarrow \text { part_of }(Z, Y) \wedge i n(X, Z) .
\end{array}\right.
$$

| Query | Answer |
| :--- | :--- |
| ?part_of(r123, B). | part_of(r123, cs_building) |

?part_of(r023, cs_building). no
?in(kim, r023). no
? in (kim, B).

## Example Queries

$$
K B=\left\{\begin{array}{l}
\text { in }(\text { kim, } r 123) . \\
\text { part_of }(r 123, \text { cs_building }) . \\
i n(X, Y) \leftarrow \text { part_of }(Z, Y) \wedge i n(X, Z) .
\end{array}\right.
$$

| Query | Answer |
| :--- | :--- |
| ?part_of(r123, $B)$. | part_of(r123, cs_buid |
| ?part_of(r023, cs_building). no |  |
| ?in(kim, r023). | no |
| ?in(kim, B). | in (kim, r123) |
|  | in(kim, cs_building) |

## Logical Consequence

Atom $g$ is a logical consequence of $K B$ if and only if:

- $g$ is a fact in $K B$, or
- there is a rule

$$
g \leftarrow b_{1} \wedge \ldots \wedge b_{k}
$$

in $K B$ such that each $b_{i}$ is a logical consequence of $K B$.

## Debugging false conclusions

To debug answer $g$ that is false in the intended interpretation:

- If $g$ is a fact in $K B$, this fact is wrong.
- Otherwise, suppose $g$ was proved using the rule:

$$
g \leftarrow b_{1} \wedge \ldots \wedge b_{k}
$$

where each $b_{i}$ is a logical consequence of $K B$.

- If each $b_{i}$ is true in the intended interpretation, this clause is false in the intended interpretation.
- If some $b_{i}$ is false in the intended interpretation, debug $b_{i}$.

## Electrical Environment

## Axiomatizing the Electrical Environment

$\% \operatorname{light}(L)$ is true if $L$ is a light
$\operatorname{light}\left(I_{1}\right)$. light $\left(I_{2}\right)$.
\% down( $S$ ) is true if switch $S$ is down
down $\left(s_{1}\right)$. up $\left(s_{2}\right)$. up $\left(s_{3}\right)$.
\% ok( $D$ ) is true if $D$ is not broken
ok $\left(I_{1}\right)$. ok $\left(I_{2}\right)$. ok $\left(c b_{1}\right)$. ok $\left(c b_{2}\right)$.
?light $\left(I_{1}\right)$.

## Axiomatizing the Electrical Environment

\% lit $(L)$ is true if the light $L$ is lit

$$
\operatorname{lit}(L) \leftarrow \operatorname{light}(L) \wedge \operatorname{ok}(L) \wedge \operatorname{live}(L)
$$

\% live $(C)$ is true if there is power coming into $C$

```
live(Y)}
        connected_to(Y,Z)^
        live(Z).
live(outside).
```

This is a recursive definition of live.

## Recursion and Mathematical Induction

```
above( }X,Y)\leftarrowon(X,Y)
above(X,Y)\leftarrowon(X,Z)^above(Z,Y).
```

This can be seen as:

- Recursive definition of above: prove above in terms of a base case (on) or a simpler instance of itself; or
- Way to prove above by mathematical induction: the base case is when there are no blocks between $X$ and $Y$, and if you can prove above when there are $n$ blocks between them, you can prove it when there are $n+1$ blocks.

## Limitations

Suppose you had a database using the relation:

$$
\text { enrolled }(S, C)
$$

which is true when student $S$ is enrolled in course $C$.
You can't define the relation:

$$
\text { empty_course }(C)
$$

which is true when course $C$ has no students enrolled in it.
This is because empty_course ( $C$ ) doesn't logically follow from a set of enrolled relations. There are always models where someone is enrolled in a course!
