

REGULAR EXPRESSIONS & LANGUAGES

20/11/2008

EG.1

EXERCISE 1

Write regular expressions for the following languages:

- The set of all strings consisting of zero or more a's followed by zero or more b's, followed by zero or more c's;
- The set of all strings that consist of either 01 repeated one or more times or 010 repeated one or more times;
- The set of strings that either begin or end (or both) with 01;
- The set of strings over $\{x, y, z\}$ such that the number of y's is divisible by three;
- The set of strings over $\{0, 1\}$ such that at least one of the last ten positions is a 1;
- The set of strings over $\{0, 1, \dots, 9\}$ such that the final digit has appeared before;
- The set of strings over $\{0, 1, \dots, 9\}$ such that the final digit has not appeared before.

EXERCISE 2

Give English descriptions of the languages over the alphabet $\{a, b, c\}$ defined by the following regular expressions:

a) $(a+b)(a+b)(a+b)$ b) $(\epsilon+a)b(\epsilon+c)$

c) $(cb)^* + b(cb)^* + (cb)^*c + b(cb)^*c$

EXERCISE 3

- Show that for every regular language L we have $(L^*)^* = L^*$.
- Show that for all regular languages L and M we have $(L^*M^*)^* = (L \cup M)^*$. [Note: $(L \cup M)^* = \mathcal{L}((L+M)^*)$]

SOLUTIONS (20/11/2008)

EG.2

1) a) $a^* b^* c^*$

1) b) $(01)(01)^* + (010)(010)^*$ or $(01)^+ + (010)^+$

1) c) $(01)(0+1)^* + (0+1)^*(01)$

Note: we assume that the strings are over $\{0,1\}$.

1) d) $((x+z)^* y (x+z)^* y (x+z)^* y (x+z)^*)^*$

1) e) Let $E_i = \underbrace{(0+1) \dots (0+1)}_{i \text{ times}} 1 \underbrace{(0+1) \dots (0+1)}_{(9-i) \text{ times}}, i \in \{0, 1, \dots, 9\}$.

Then $E = (0+1)^* (E_0 + E_1 + \dots + E_9)$.

1) f) Let $E_d = 0+1+\dots+9$. Then $E = E_d^* 0 E_d^* 0 + E_d^* 1 E_d^* 1 + \dots + E_d^* 9 E_d^* 9$.

1) g) Let $E_0 = 1+2+\dots+9$, $E_i = 0+\dots+(i-1)+(i+1)+\dots+9$ ($1 \leq i \leq 8$),
 $E_9 = 0+1+\dots+8$, and $E_d = 0+1+\dots+9$.

Then $E = E_d + E_0^+ 0 + E_1^+ 1 + \dots + E_9^+ 9$.

(Also: $E = E_0^* 0 + E_1^* 1 + \dots + E_9^* 9$.)

2) a) The set of all strings of length three that do not contain the symbol c: $\{aaa, aab, aba, abb, baa, bab, bba, bbb\}$.2) b) The set of all strings with exactly one b, eventually preceded by an a and/or followed by a c: $\{b, ab, bc, abc\}$.

2) c) The set of all strings consisting of alternating b's and c's. Alternative regular expressions for the language are:

● $(\varepsilon+c)(bc)^*(\varepsilon+b)$

● $(bc)^* + (cb)^* + c(bc)^* + b(cb)^*$

3)a) We have to show that $L^* \subseteq (L^*)^*$ and $(L^*)^* \subseteq L^*$.

EG.3

$$\boxed{L^* \subseteq (L^*)^*}$$

Trivial since $(L^*)^* = \text{def } \{\epsilon\} \cup L^* \cup L^*L^* \cup \dots$

$$\boxed{(L^*)^* \subseteq L^*}$$

Given $w \in (L^*)^*$ we have to show that $w \in L^*$.

If $w \in (L^*)^*$ then there exists $n \in \mathbb{N}$ such that $w = w_1 \dots w_n$ where $w_i \in L^*$ ($1 \leq i \leq n$). Since, for all $i \in \{1, 2, \dots, n\}$, there exists $m_i \in \mathbb{N}$ such that $w_i = w_{i,1} \dots w_{i,m_i}$ where $w_{i,j} \in L$ ($1 \leq j \leq m_i$) we have that $w = (w_{1,1} \dots w_{1,m_1}) \dots (w_{n,1} \dots w_{n,m_n})$.

Thus $w \in L^*$.

3)b) We have to show that $(L^* \cap M^*)^* \subseteq (L \cup M)^*$ and $(L \cup M)^* \subseteq (L^* \cap M^*)^*$.

$$\boxed{(L^* \cap M^*)^* \subseteq (L \cup M)^*}$$

Given $w \in (L^* \cap M^*)^*$ we have to show that $w \in (L \cup M)^*$.

If $w \in (L^* \cap M^*)^*$ then $w = w_1 \dots w_n$ where $w_i \in L^* \cap M^*$. Since, for all $i \in \{1, \dots, n\}$, $w_i = u_{i,1} \dots u_{i,k_i} v_{i,1} \dots v_{i,l_i}$ where $u_{i,j} \in L$ and $v_{i,j} \in M$ we have that:

$$w = (u_{1,1} \dots u_{1,k_1} v_{1,1} \dots v_{1,l_1}) \dots (u_{n,1} \dots u_{n,k_n} v_{n,1} \dots v_{n,l_n}).$$

Thus $w \in (L \cup M)^*$.

$$\boxed{(L \cup M)^* \subseteq (L^* \cap M^*)^*}$$

Given $w \in (L \cup M)^*$ we have to show that $w \in (L^* \cap M^*)^*$.

If $w \in (L \cup M)^*$ then $w = w_1 \dots w_n$ where each w_i is in either L or M . If w_i is in L then w_i is also in L^* and, since ϵ is in M^* , $w_i = w_i \epsilon$ is in $L^* \cap M^*$.

Similarly, if w_i is in M then w_i is in $L^* \cap M^*$.

Thus $w \in (L^* \cap M^*)^*$.
